Todo App Report

LINK: <https://razas-todo-app.netlify.app/>

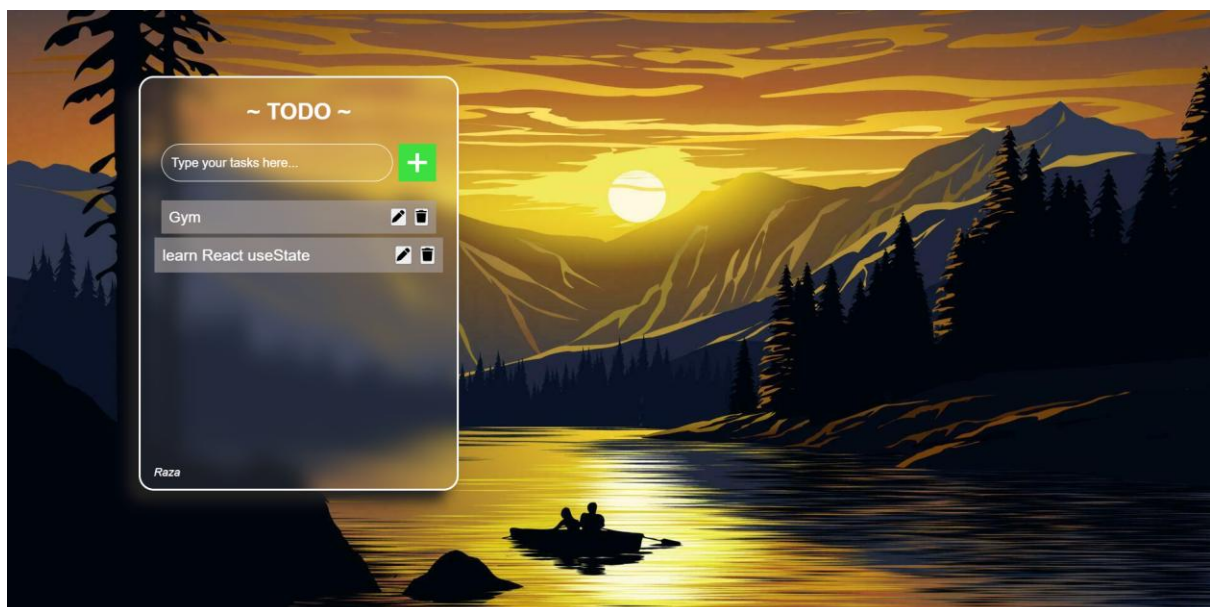

I created a Todo App as a simple task management project. The main purpose of this app is to help users manage their daily tasks efficiently.

In this project, I implemented CRUD operations:

- Create: Users can add new tasks
- Read: Users can view all added tasks
- Update: Users can edit or mark tasks as completed
- Delete: Users can remove tasks they no longer need

I used basic web technologies like HTML, CSS, and JavaScript. The app allows users to easily organize and track their tasks in a simple interface.

This project helped me understand the core concept of CRUD operations and improved my frontend development skills.

Personal Portfolio Report

LINK: <https://razas-portfolio.netlify.app/>

I created a personal portfolio website to showcase my skills, projects, and professional information in a structured and visually appealing way.

The portfolio includes a CV button that allows users to download or view my resume easily. It also has a live projects section, where I displayed my work with direct links to live demos, helping visitors explore my projects in real-time.

I made the website fully responsive, ensuring it works properly on all devices including mobile, tablet, and desktop screens.

A Contact Me form is also added, allowing visitors to send messages or project inquiries directly.

Additionally, I integrated social media links (such as LinkedIn and GitHub) so users can connect with me easily and view my professional profiles.

This project helped me improve my frontend development skills, especially in layout design, responsiveness, and user interaction.
